CATALOGUE
OF
PAPILIONIDAE & PIERIDAE
(LEPIDOPTERA: RHOPALOCERA)

Charles A. Bridges

15 April 1988

© 1988 by Charles A. Bridges.

The camera-ready copy was produced on an Imagen® 8/300 Page Printer connected to a Vax® 11/780 computer running the Unix© 4BSD operating system. The text was prepared using the DITROFF text processing program and the so-called -ME macro package to process a file of pseudo-text (text interspersed with command lines and control codes) prepared by the author. The book was designed, set and printed by the author and bound by the Lincoln Bookbindery, Urbana, Illinois.

CATALOGUE OF PAPILIONIDAE & PIERIDAE (LEPIDOPTERA : RHOPALOCERA)

by

Charles A. Bridges

ABSTRACT

Notes on the species-group names of the butterflies in the families **PAPILIONIDAE & PIERIDAE (LEPIDOPTERA : RHOPALOCERA)** are arranged in a **six-part catalogue. Part I** is an alphabetic list of the 14117 names, with data on authorship, year and place of original publication, current usage, location of type specimen, type locality, references, and occasional brief notes. **Part II** is a synonymic list of the names. **Part III** is a list of the names arranged by author and publication, and serves as an index to the bibliography. **Part IV** is the bibliography of 4330 items. **Part V** is an index to the bibliography, arranged by journal title. **Part VI** is an index to the bibliography, arranged by year of publication. **Appendix I** is a Synonymic List of the Family-Group names of the Papilionidae & Pieridae. **Appendix II** is a Synonymic List of the Genus-Group names of the Papilionidae & Pieridae.

The arrangement of the names in based entirely on bibliographic references. No specimens have been examined, and no new names are introduced.

TABLE OF CONTENTS

Introduction.....vii

Part I - Species-Group Names.....ii+324 pp
Part II - Index to Genera.....ii+93 pp
Part III - Index to Authors and Bibliography.....ii+131 pp
Part IV - Bibliography.....ii+98 pp
Part V - Index to Journals and Serials.....ii+37 pp
Part VI - Index to Bibliography by Year.....ii+12 pp

Appendix I Family-Group Names.....ii+1 pp
Appendix II Genus-Group Names.....ii+4 pp

INTRODUCTION

Zoological nomenclature is the system of scientific names applied to taxonomic units of animals, while the International Code of Zoological Nomenclature is the system of rules and recommendations governing the use of these names at the family-group, genus-group and species-group levels. It is consistent with the code to say that names may be objectively classified as either **available** or **unavailable**, the determination depending on the details of publication, etc. The **available** names may be further divided into **objectively valid** and **objectively invalid** names, and, in accordance with the Code, only the **objectively valid** names may be used for naming taxa.

In addition to the above **objective** classification of names, the **objectively valid** names may be further subjectively classified according to their use as names of species, subspecies or unused synonyms. When a name is used for a species- or subspecies-level taxon it is said to be validated at the species- or subspecies-level, while if it is considered to apply to a taxon which has an older valid names, it is said to be invalidated as a junior subjective synonym.

In this catalogue the species-group names are assigned one of the five letter codes [a-e] according to their status as **available/unavailable, objectively valid/invalid**, and depending on their use as the name for a species, subspecies, or as an unused synonym, as defined by the following table.

Table I - **Definition of Status Letter Codes [a-e)]**

Letter code	Nomenclatural status (objective)	Subjective use	Print	Indent (in Part II)	Number of names
a	Available, Valid	Species	Bold	1 em	1792
b	Available, Valid	Subspecies	Bold	2 em	4306
c	Available, Valid	Synonym	Bold	3 em	2977
d	Available, Invalid	Unused	Light	4 em	358
e	Unavailable	Unused	Italics	5 em	4684

DATA ON SUBSPECIES

The following table shows how subspecies are employed.

Table II - **Data on Subspecies**

Subspecies	1	2	3	4	5	6	7	8 or more
Species	918	272	176	106	71	54	32	163

BASIC LITERATURE

Journal titles have been checked in the *World List of Scientific Periodicals* [b4283], and these data are included in Part V. Bibliographic information on the authors has been found in Gilbert, 1978 (*A Compendium of the Biographical Literature on Deceased Entomologists*, [b1706), Carpenter, 1945 & 1953 (*Bibliography of Biographies of Entomologists*, [b0739 & b0740]), Horn and Schenkling, 1928 (*Index Litteraturae Entomologicae, Serie I*) [b2081], Derksen and Scheiding-Göllner, 1965 (*Index Litteraturae Entomologicae, Serie II* [b0987]), and, finally, in the *Commemorative Volume of the Lepidopterists' Society* [b2506].

The task of building up the bibliography has been greatly aided by using, in addition to the above, Moulds, 1977 (*Bibliography of the Australian Butterflies* [b2755]), Field, dos Passos & Masters, 1974 (*A Bibliography of the Catalogs, Lists, Faunal and Other Papers of the Butterflies of North America., etc.*) [b1403], Kudrna, 1986 (*Butterflies of Europe, Volume 1. Concise Bibliography*) [b2391], and the catalogues of the firm of Wheldon & Wesley [b4246].

PUBLICATION DATES OF NAMES

The 10th edition of Linnaeus' *Systema Naturae* [b2506l] marks the beginning of the consistent general application of binomial nomenclature in zoology. The date 1 January 1758 is arbitrarily assigned to that work, and taken as the starting point of zoological nomenclature. The following table gives the number of names published in each 5-year interval from 1758 to the present. The data are broken down according to the nomenclatural status of the names, representd by the status codes [a-e], as previously defined.

PUBLICATION DATES (*continued*)

Table III - **Publication Date of Species-Group Names**

YEARS /status code	a	b	c	d	e
1758-1762	47	1	8	3	0
1763-1767	16	2	5	5	4
1768-1772	3	0	2	1	0
1773-1777	71	10	35	19	1
1778-1782	45	7	63	17	5
1783-1787	10	4	11	7	6

1973-1977	18	87	8	2	37
1978-1982	16	147	18	8	111
1983-1987	15	86	14	2	52

MUSEUMS WITH TYPE SPECIMENS

The following list gives data on the location of type specimens, taken from various sources. Since only 1322 entries in the catalogue include information about the type specimen it can be seen that the table is far from complete. Acronyms have usually been taken from Heppner & Lamas (*Acronyms for World Museum Collections of Insects*) [b1964].

AME.....17 Allyn Museum of Entomology, Florida State Museum, Sarasota, Florida.
AMNH.....71 American Museum of Natural History, New York
ANIC.....4 Australian National Insect Collection
ANSP.....8 Academy of Natural Sciences, Philadelphia
BMNH.....297 British Museum (Natural History)
CAS.....9 California Academy of Sciences, San Francisco, California.
CIS.....1 California Insect Survey, University of California, Berkeley
CM.....66 Carnegie Museum of Natural History, Pittsburgh
CNC.....18 Canadian National Collection, Ottawa, Ontario
CU.....1 Cornell University Collection, Ithaca
DMNH.....1 Denver Museum of Natural History.
EUM.....1 Entomological Laboratory, Ehime University, Matuyama, Japan
FMNH.....20 Field Museum of Natural History, Chicago
HMUG.....3 Hunterian Collection, University of Glasgow
HNHA.....2 Himeji Natural History Association, Japan
IBUNAM.....4 Instituto de Biología. Universidad Nacional Autónoma de México.
KUCGE.....8 Kyushu University, College of General Education, Fukuoka
KUFA.....1 Kyushu University, College of Agriculture, Fukuoka
LACM.....18 Natural History Museum of Los Angeles County
Leiden.....4 Rijksmuseum van Natuurlijke Historie, Leiden (=RNH)
Macleay.....1
MBRBA.....1 Museu "Bernardino Rivadavia" de Buenos Aires
MC.....3 Museu de Catalunya, Barcelona, Spain.
MCZ.....12 Museum of Comparative Zoology, Harvard University
MHNCM.....5 Museo de Historia Natural de la Ciudad de México.
MHNG.....1 Museé d'Histoire Naturelle de Genève.
MHNJP.....2 Museu de Historia Natural "Javier Prado", Lima
MNHN.....96 Museum Nationale d'Histoire Naturelle, Paris
MNHNM.....1 Museo National de Historia Natural, Mexico
MNRJ.....1 Museu Nacional Rio de Janeiro, Brazil
MRAC.....3 Musée Royal de l'Afrique Centrale.
MZS.....143 Museo Zoologico de la Specola, Florence.
NCM.....1 Norwich Castle Museum, Norwich
NHMV.....1 Naturhistorisches Museum, Vienna
NMBZ.....3 National Museum, Bulawayo, Zimbabwe
NMW.....1 Naturhistorisches Museum Wien
NSMT.....2 National Science Museum, Tokyo
NYSM.....1 New York State Museum, Albany
OMNH.....1 Osaka Municipal Museum of Natural History, Osaka
PNM.....1 Prague National Museum
RNH.....21 Rijksmuseum van Natuurlijke Historie, Leiden, Netherlands
SDNHM.....1 San Diego Natural History Museum, San Diego
SM.....4 Senckenberg-Museum, Frankfurt-am-Main
SMNS.....1 Staatiches Museum für Naturkunde, Stuttgart
UMO.....10 University Museum, Oxford
UNAM.....1 Universidat Nacional Autónoma de Mexico
USNM.....58 National Museum of Natural History, Smithsonian Institution, Washingtion, D.C.
UZIU.....2 Universitets Zoologiska Institut, Uppsala
YPM.....1 Yale Peabody Museum
ZIL.....5 Zoological Institute of the U.S.S.R. Academy of Sciences, Leningrad
ZMB.....17 Zoologisches Museum, Berlin (=ZMHU)
ZMHU.....24 Zoologische Museum der Humboldt Universität, Berlin, East Germany
ZMKU.....1 Zoologische Museum of Kiev University
ZMMU.....2 Zoological Museum of the Moscow University
ZMS.....1 National Natural History Museum, Sofia (=NHMS)
biblio.....181 Based on bibliographic reference.
lost.....182 Type is known to have been lost or destroyed.
pc.....113 Type is in a private collection.

PART I
ALPHABETIC LIST OF NAMES

INTRODUCTION

In this section the species-group names are arranged in alphabetic order. If two names are spelled the same, they are ordered by date of publication, and if they have the same publication date they are arranged by the authors name. In the section marks "Refs" is given a list of the references actually consulted by the author. Occasionaly, however, references are included here that have not been seen, and in this case they are of the form ns0000, instead of b0000. For example, see **acadica**. Similarly, the notation x0000 is used to indicate that the reference has been consulted, but that the name was not found, although it might logically be expected to be there. This usually means that the reference is to a work which is a catalogue or regional list. For example, see **abbotti**.

ABBREVIATIONS

The following abbreviations are used in this section.

ab.....abberation
CG.....Current Genus
f.....form
H.....Homonym
IFS.....Infrasubspecific
JOS.....Junior Objective Synonym
LifeH.....Life History
NN.....Nomen Nudum
OD.....Original Description
OS.....Objective Synonym
PS.....Published in Synonymy
PWI.....Published Without Indication
RA.....Race
Refs.....References
SS.....Subjective Synonym
TypeL.....Type Locality
(-).....male
(+).....female

(96):27 [*b1393*]] [*Note - The plate came in 1832, text in [1834]. Described from a mixed series. Only the male is nastes. According to F. Martin Brown, James H. McDunnough is responsible for the type label on the advice of Oberthür's curator, Carl Hofer. Ferris points out that the specimen should be considered a lectotype, not a holotype and I consider this remark as the first validly published lectotype designation.*] [Refs - b2689; b2270; b1961; b0909; b1386; b4111; b1039; b0886; b0184; b1393; b2308; b0430; b0431; b1394; b2629; b2053; b0432; b3225; b3934; b1703]
